

Complete SRE environment with WSL, Minikube, Prometheus, Grafana, and our React-based dashboard application

1. WSL not detected:

```
hafsa_027@Dell:~/Grafana/proj2$ ./complete-react-sre-script.sh
[INFO] 2025-03-20 05:26:30 - Starting React SRE Application setup
[INFO] 2025-03-20 05:26:30 - Checking WSL environment...
[ERROR] 2025-03-20 05:26:30 - This script must be run within WSL
```

```
hafsa_027@Dell:~/Grafana/proj2$ vi complete-react-sre-script.sh
hafsa_027@Dell:~/Grafana/proj2$ ./complete-react-sre-script.sh
[INFO] 2025-03-20 05:41:49 - Starting React SRE Application setup
[INFO] 2025-03-20 05:41:49 - Checking WSL environment...
[INFO] 2025-03-20 05:41:49 - WSL detected, continuing with setup
[INFO] 2025-03-20 05:41:49 - Creating project directory structure
[INFO] 2025-03-20 05:41:49 - Project directories created at /home/hafsa_027/react-sre-project
[INFO] 2025-03-20 05:41:49 - Installing system dependencies...
[INFO] 2025-03-20 05:41:49 - Updating package lists
[sudo] password for hafsa_027:
```

Replace with:- **grep -qEi "(microsoft|wsl)" /proc/version**

- q → Quiet mode: The script only displays if WSL is detected (exit status 0 for match, 1 for no match).
- E → Extended Regex: For the | (OR) operator, matching either "microsoft" or "wsl".
- i → Ensures matches are case-insensitive (WSL, wsl, Microsoft, MICROSOFT all match).

2. Latest version of grafana does not support React 19 so install React 18:

```
Happy hacking!
npm error code ERESOLVE
npm error ERESOLVE unable to resolve dependency tree
npm error
npm error While resolving: sre-react-app@0.1.0
npm error Found: react@19.0.0
npm error node_modules/react
npm error   react@"^19.0.0" from the root project
npm error
npm error Could not resolve dependency:
npm error peer react@"^18.0.0" from @grafana/ui@11.5.2
npm error node_modules/@grafana/ui
npm error   @grafana/ui@"*" from the root project
npm error
npm error Fix the upstream dependency conflict, or retry
npm error this command with --force or --legacy-peer-deps
npm error to accept an incorrect (and potentially broken) dependency resolution.
npm error
npm error For a full report see:
npm error /home/hafsa_027/.npm/_logs/2025-03-20T05_45_59_676Z-eresolve-report.txt
npm error A complete log of this run can be found in: /home/hafsa_027/.npm/_logs/2025-03-20T05_45_59_676Z-debug-0.log
```

Replace react 19 with react 18

```
# Manually install React 18 (to avoid conflicts
with @grafana/ui)
echo "[INFO] Downgrading React to version 18..."
npm install react@18 react-dom@18

# Install additional dependencies for SRE
npm install --save \
  react@18 react-dom@18 \
```

3. Module not found:

```
Traceback (most recent call last):
  File "/usr/lib/cnf-update-db", line 3, in <module>
    import apt_pkg
ModuleNotFoundError: No module named 'apt_pkg'
Reading package lists... Done
W: http://pkg.jenkins.io/debian-stable/binary/Release.gpg: Key is stored in legacy trusted.gpg keyring (/etc/apt/trusted.gpg)
, see the DEPRECATION section in apt-key(8) for details.
E: Problem executing scripts APT::Update::Post-Invoke-Success 'if /usr/bin/test -w /var/lib/command-not-found/ -a -e /usr/lib
/cnf-update-db; then /usr/lib/cnf-update-db > /dev/null; fi'
E: Sub-process returned an error code
[ERROR] 2025-03-20 05:51:05 - Failed to update package lists
```

`apt_pkg` exists but might not be correctly linked or found in your Python environment.

```
hafsa_027@Dell:~/Grafana/proj2$ python3 -V
Python 3.9.21
hafsa_027@Dell:~/Grafana/proj2$ ls -l /usr/lib/python3/dist-packages/ | grep apt_pkg
drwxr-xr-x  2 root root  4096 Mar 20 06:03 apt_pkg-stubs
-rw-r--r--  1 root root 347328 Jan 27 11:40 apt_pkg.cpython-312-x86_64-linux-gnu.so
```

```
hafsa_027@Dell:~/Grafana/proj2$ python3 --version
Python 3.9.21
hafsa_027@Dell:~/Grafana/proj2$ ls /usr/bin/python*
/usr/bin/python3 /usr/bin/python3-config /usr/bin/python3.12 /usr/bin/python3.12-config /usr/bin/python3.9 /usr/bin/pyth
on3.9-config
hafsa_027@Dell:~/Grafana/proj2$ sudo update-alternatives --install /usr/bin/python3 python3 /usr/bin/python3.9 1
sudo update-alternatives --install /usr/bin/python3 python3 /usr/bin/python3.12 2
[sudo] password for hafsa_027:
update-alternatives: using /usr/bin/python3.12 to provide /usr/bin/python3 (python3) in auto mode
hafsa_027@Dell:~/Grafana/proj2$ sudo update-alternatives --config python3
There are 2 choices for the alternative python3 (providing /usr/bin/python3).

  Selection    Path                                Priority  Status
  -----
* 0            /usr/bin/python3.12                2        auto mode
  1            /usr/bin/python3.12                2        manual mode
  2            /usr/bin/python3.9                 1        manual mode

Press <enter> to keep the current choice[*], or type selection number: 1
hafsa_027@Dell:~/Grafana/proj2$ python3 --version
Python 3.12.3
```

4. python setup.py develop did not run successfully.

```
error: subprocess-exited-with-error

x python setup.py develop did not run successfully.
  exit code: 1
  > [61 lines of output]
    running develop
    /usr/lib/python3/dist-packages/setuptools/command/develop.py:40: EasyInstallDeprecationWarning: easy_install command is d
eprecated.
      !!

    *****
    Please avoid running ``setup.py`` and ``easy_install``.
    Instead, use pypa/build, pypa/installer or other
    standards-based tools.

    See https://github.com/pypa/setuptools/issues/917 for details.
    *****

    !!
    easy_install.initialize_options(self)
    /usr/lib/python3/dist-packages/setuptools/_distutils/cmd.py:66: SetuptoolsDeprecationWarning: setup.py install is depreca
ted.
      !!
```

pyproject.toml instead of setup.py

setup.py: a Python script traditionally used for defining a package.

toml: Defines package metadata in a structured, declarative format (TOML syntax). Replaces setup.py and setup.cfg by allowing different build systems (like setuptools, poetry, hatch).# Create a minimal pyproject.toml for editable installs

Replace the code with :

```
cat > "$PROJECT_ROOT/wzegh/pyproject.toml" << EOL
```

```
[build-system]
```

```
requires = ["setuptools", "wheel"]
```

```
build-backend = "setuptools.build_meta"
```

```
[project]
```

```
name = "wzegh"
```

```
version = "0.1.0"
```

```
description = "Mock implementation of wzegh library"
```

```
dependencies = []
```

```
EOL
```

```
# Install the mock wzegh library
```

```
cd "$PROJECT_ROOT/wzegh"
```

```
pip install -e .
```

5. @prometheus/client@ not found in registry:

```
Run `npm audit` for details.
npm warn ERESOLVE overriding peer dependency
npm error code E404
npm error 404 Not Found - GET https://registry.npmjs.org/@prometheus%2fclient - Not found
npm error 404
npm error 404 '@prometheus/client@*' is not in this registry.
npm error 404
npm error 404 Note that you can also install from a
npm error 404 tarball, folder, http url, or git url.
npm error A complete log of this run can be found in: /home/hafsa_027/.npm/_logs/2025-03-20T08_13_51_369Z-debug-0.log
```

Replace @prometheus/client with prom-client

```
# Install additional dependencies for SRE
npm install --save \
  react@18 react-dom@18 \
  axios \
  react-router-dom \
  swr \
  prom-client \
  react-error-boundary \
  @grafana/ui \
  history

log "INFO" "React application created successfully"
}
```

6.

```
hafsa_027@Dell:~/Grafana/proj2$ cd /home/hafsa_027/react-sre-project
hafsa_027@Dell:~/react-sre-project$ ls
deploy_sre_app.sh  kubernetes  monitoring  requirements.txt  scripts  sre-react-app  venv  wzegh
hafsa_027@Dell:~/react-sre-project$ code .
hafsa_027@Dell:~/react-sre-project$ ./deploy_sre_app.sh
[INFO] 2025-03-20 09:38:15 - Starting React SRE Application deployment
[ERROR] 2025-03-20 09:38:15 - This script must be run within WSL
```

grep -qEi "(microsoft|wsl)" /proc/version

```
$ deploy_sre_app.sh X
$ deploy_sre_app.sh
21  | ~/react-sre-project/deploy_sre_app.sh
26  | case $level in
39  | esac
40  | }
41
42  # Check if we're running in WSL
43  check_wsl() {
44  | if ! grep -qEi "(microsoft|wsl)" /proc/version; then
45  | | log "ERROR" "This script must be run within WSL"
46  | | exit 1
47  | fi
48
49  | log "INFO" "WSL detected, continuing with deployment"
50  | }
51
```

7. Allocation of memory:

```
[DEBUG] 2025-03-20 09:40:27 - Running command: minikube start --memory=4096 --cpus=2 --driver=docker
[WARN] 2025-03-20 09:40:28 - Command failed (attempt 2/3): X Exiting due to RSRC_OVER_ALLOC_MEM: Requested memory allocation 4096MB is more than your system limit 3802MB.
* Suggestion: Start minikube with less memory allocated: 'minikube start --memory=2200mb'

[DEBUG] 2025-03-20 09:40:33 - Running command: minikube start --memory=4096 --cpus=2 --driver=docker
[WARN] 2025-03-20 09:40:34 - Command failed (attempt 3/3): X Exiting due to RSRC_OVER_ALLOC_MEM: Requested memory allocation 4096MB is more than your system limit 3802MB.
* Suggestion: Start minikube with less memory allocated: 'minikube start --memory=2200mb'

[ERROR] 2025-03-20 09:40:39 - Command failed after 3 attempts: minikube start --memory=4096 --cpus=2 --driver=docker
[ERROR] 2025-03-20 09:40:39 - Failed to start Minikube
```

The screenshot shows a code editor with the following components:

- Top Bar:** Contains file tabs for `deploy_sre_app.sh` and `minikube_control.py`.
- Sidebar:** Displays the project structure for `REACT-SRE-PROJECT...`, including folders like `kubernetes`, `base`, `overlays`, `monitoring`, `scripts`, and files like `deploy_app.py`, `minikube_control.py`, `sre-react-app`, `venv`, `wzagh`, `deploy_sre_app.sh`, and `requirements.txt`.
- Main Editor:** Shows the `minikube_control.py` file with the following code:

```
72 def start_minikube():
73     if check_minikube_status():
74         log("INFO", "Minikube is already running")
75         return True
76
77     log("INFO", f"Starting Minikube (timeout: {MINIKUBE_WAIT_TIMEOUT}s)")
78
79     # Fix for wzagh library error - create mock environment variable
80     os.environ["WZEGH_CONFIGURED"] = "TRUE"
81
82     # Start Minikube with memory and CPU settings suitable for SRE tools
83
84     result = run_command(
85         ["minikube", "start", "--memory=2200", "--cpus=2", "--driver=docker"],
86         timeout=MINIKUBE_WAIT_TIMEOUT
87     )
88
89     if result is None:
90         log("ERROR", "Failed to start Minikube")
91         return False
```
- Bottom Bar:** Contains tabs for `Problems`, `Output`, `Debug Console`, `Terminal`, and `Ports` (5).

8. kubectl namespace is not created:

```
hafsa_027@Dell:~/react-sre-project$ ./deploy_sre_app.sh
[INFO] 2025-03-20 10:03:25 - Starting React SRE Application deployment
[INFO] 2025-03-20 10:03:25 - WSL detected, continuing with deployment
[INFO] 2025-03-20 10:03:25 - Activating Python virtual environment
[INFO] 2025-03-20 10:03:25 - Starting Minikube
[DEBUG] 2025-03-20 10:03:25 - Running command: minikube status -o json
[INFO] 2025-03-20 10:03:27 - Minikube is already running
[INFO] 2025-03-20 10:03:27 - Waiting for Minikube to be fully ready
[INFO] 2025-03-20 10:03:37 - Deploying React SRE Application with monitoring
[DEBUG] 2025-03-20 10:03:37 - Running command: minikube status -o json
[INFO] 2025-03-20 10:03:38 - Creating Kubernetes namespaces...
[DEBUG] 2025-03-20 10:03:38 - Running command: kubectl create namespace react-sre-app --dry-run=client -o yaml
[DEBUG] 2025-03-20 10:03:38 - Running command: kubectl apply -f -
[WARN] 2025-03-20 10:04:08 - Command timed out after 30s (attempt 1/3)
[DEBUG] 2025-03-20 10:04:13 - Running command: kubectl apply -f -
[WARN] 2025-03-20 10:04:43 - Command timed out after 30s (attempt 2/3)
[DEBUG] 2025-03-20 10:04:48 - Running command: kubectl apply -f -
[WARN] 2025-03-20 10:05:18 - Command timed out after 30s (attempt 3/3)
[ERROR] 2025-03-20 10:05:18 - Command failed after 3 attempts: kubectl apply -f -
[ERROR] 2025-03-20 10:05:18 - Failed to create namespace react-sre-app
```

Replace:

```
apply_result = run_command(
    f'{KUBECTL_CMD} apply -f -',
    timeout=30,
    shell=True,
    retry=3,
)
```

With:

```
apply_result = run_command(
    f'{KUBECTL_CMD} create namespace {namespace} --dry-run=client -o yaml | {KUBECTL_CMD}
apply -f -',
    timeout=30,
    shell=True,
    retry=3,
)
```

--dry-run=client -o yaml → Does a "dry run" of the command and outputs YAML instead of actually applying it.

- **--dry-run=client**: Simulates the command **without making changes**.
- **-o yaml**: Outputs the result in YAML format.

✓ This ensures the YAML is correctly piped into kubectl apply.

9. TypeError: run_command() got an unexpected keyword argument 'cwd'

```
[INFO] 2025-03-20 10:07:23 - Kubernetes namespaces created successfully
[INFO] 2025-03-20 10:07:23 - Building React application...
