Labels:        app=prometheus

Events:
  Type      Reason      Age          From          Message
  ----      -
Warning    FailedScheduling  115s (x5 over 22m)  default-scheduler  0/1 nodes are available: 1 Insufficient memory.
preemption: 0/1 nodes are available: 1 No
preemption victims found for incoming pod.
```

1. In wsl-minikube-setup.sh:

Replace

minikube start --driver=docker --cpus=2 --memory=2048--disk-size=10g

with

minikube start --driver=docker --cpus=2 --memory=4096 --disk-size=10g

2. In prometheus-setup.sh:

```
resources:
  requests:
    cpu: 100m
    memory: 256Mi
  limits:
    cpu: 300m
    memory: 512Mi
```

```
hafsa_027@Dell:~/Grafana/proj3$ ./prometheus-setup.sh
===== Prometheus Setup Script =====
This script will install and configure Prometheus in Minikube
Applying Prometheus Kubernetes manifests...
configmap/prometheus-config unchanged
deployment.apps/prometheus configured
service/prometheus unchanged
Waiting for Prometheus deployment to be ready...
Waiting for deployment "prometheus" rollout to finish: 0 of 1 updated replicas are available...
deployment "prometheus" successfully rolled out
Setting up port forwarding for Prometheus...
=====
Prometheus has been successfully deployed!
Access the Prometheus UI at: http://localhost:9090

```
memory: 256Mi
```

```
Grafana has been successfully deployed!  
Access Grafana UI at: http://localhost:3000  
Default login credentials: admin/admin
```

Grafana Instructions:

1. After logging in with the default credentials (admin/admin), you'll be prompted to change the password.
2. The Prometheus data source is already configured.
3. A basic SRE dashboard has been pre-configured with key metrics.
4. To create additional dashboards:
 - Click on '+ Create' in the left sidebar menu
 - Select 'Dashboard' to create a new dashboard
 - Click 'Add new panel' to add monitoring metrics
 - In the query panel, you can use PromQL to query metrics from Prometheus
5. For monitoring Angular and Flask applications:
 - Use metrics like 'http_requests_total' for request counts
 - 'http_request_duration_seconds' for response times
 - 'container_memory_usage_bytes' and 'container_cpu_usage_seconds_total' for resource usage
6. To set up alerts:
 - Go to Alerting in the left sidebar
 - Click 'Create Alert Rule' to set up new alerts
 - Configure alerts for response time thresholds, error rates, or resource usage

```
Note: Port forwarding is running in the background with PID: 81920
To stop port forwarding: kill 81920
```

added tsconfig.json

The next issues related to script.sh:-

1. 🧨 Exiting due to PROVIDER_DOCKER_NOT_RUNNING: deadline exceeded running "docker version --format <no value>-<no value>:<no value>": signal: killed

💡 Suggestion: Restart the Docker service

i) Existing Minikube Profile

- **Message:** Using the docker driver based on an existing profile.
- **Problem:** Minikube detected an existing cluster profile, which might be corrupted or misconfigured from a previous failed run (e.g., due to memory or Docker issues).

Fixes : -

Restart and Verify Docker:

- Ensure Docker is running and responsive, as Minikube relies on it.

Clean Up Minikube:

- Remove any existing Minikube profile to avoid conflicts or corrupted states.

```
hafsa_027@Dell:~/sre-app$ kubectl -n sre-monitoring get svc
```
